- Place second layer of foam in case

- Place projector rod

- Place one of the leg extensions

- Place phoroceptor

- Place one of the leg extensions

- Place water bag

- Place one of the leg extensions with its rubber cap opposite the one underneath

The Morrell Spring Arm has been tested under rigorous conditions by military and civilian doctors in deployment and expedition type use. It glides through its 360 degree horizontal movement. The adjustable spring tension allows for 17 inch effortless vertical movement. The ratchet type brake knob can be used to lock the arm in any vertical position. Its powder coat gives the Morrell arm not only a nice, slick look but makes it scratch and chip resistant to take the rough treatment given during travel. Use the Morrell arm for your Phoroceptor and Projector or for a Microscope.
